Which of the following AWS managed database service provides processing power that is up to 5X faster than a traditional MySQL database.

☐ B. Aurora

☐ A. MariaDB

☐ C. PostgreSQL

☐ D. DynamoDB

Which of the following are best practices when designing cloud based systems? Choose 2 answers from the options below

☐ D. Use as many services as possible

☐ A. Build Tightly-coupled components

☐ B. Build loosely-coupled components

☐ C. Assume everything will fail

Which of the following is not a disaster recovery deployment technique.

☐ A. Pilot light

☐ D. Multi-Site

☐ B. Warm standby

☐ C. Single Site

In a fully managed service such as Amazon Aurora, what are the implications of the Shared Responsibility Model?

- ☐ D. The user is responsible for the security of the EC2 instances on which the relational database resides.
- ☐ B. Amazon is responsible for the EC2 instances, the operating system updates, patching of software and its maintenance
- ☐ A. Amazon is responsible for only the physical infrastructure on which the user's data resides.
- ☐ C. The user is responsible for the operating system updates, patching of software and its maintenance.

There is a requirement to move 10 TB data warehouse to the AWS cloud. Which of the following is an ideal service which can be used to move this amount of data to the AWS Cloud.

☐ B. Amazon Direct Connect

☐ C. Amazon S3 MultiPart Upload

☐ A. Amazon Snowball

☐ D. Amazon S3 Connector

A website for an international sports governing body would like to serve its content to viewers from different parts of the world in their vernacular language. Which is the most suitable service that will allow different language versions of the same website to be served, according to where in the world the browser is viewing from.

☐ D. Amazon Route 53☐ A. Amazon CloudFront☐ B. Content Delivery Network (CDN)☐ C. Amazon Lightsail

In the AWS Billing and Management service, which tool will allow the user to graphically visualize billing and usage over time, particularly monthly running costs.

☐ A. AWS Bills☐ D. AWS Budgets☐ B. AWS Cost Explorer☐ C. AWS Reports

When using On-Demand instances in AWS, which of the following is a false statement when it comes to the costing for the Instance.

☐ C. You have to pay the termination fees if you terminate the instance

☐ A. You pay no upfront costs for the instance

☐ B. You are charged per second based on the hourly rate

☐ D. You pay for as much as you use.

Which statement about Amazon Macie is accurate? Select TWO.

- ☐ B. Amazon Macie cannot read user data but can formulate access patterns on it.
- ☐ E. Amazon Macie is a fully managed service that does not need permission to access user data and resources
- ☐ D. Through observing Amazon CloudTrail logs, Amazon Macie is able to detect if a permitted user is accessing data that they seldom do.
- ☐ A. Using artificial intelligence (AI), Amazon Macie can be able to alert the administrator of sensitive information in a document residing in an S3 bucket.
- ☐ C. Amazon Macie provides comprehensive security for user data by preventing unauthorized access to it.

Which of the following services helps in governance, compliance, and risk auditing in AWS.

☐ A. AWS Config

☐ C. AWS Cloudwatch

☐ B. AWS Cloudtrail

☐ D. AWS SNS

You have a distributed application that periodically processes large volumes of data across multiple Amazon EC2 Instances. The application is designed to recover gracefully from Amazon EC2 instance failures. You are required to accomplish this task in the most cost-effective way.

Which of the following will meet your requirements?

☐ D. On-Demand instances

☐ A. Spot Instances

☐ C. Dedicated instances

☐ B. Reserved instances

Which of the following options would entice a company to use AWS over an on-premises data center? Choose 2 answers from the options given below

☐ D. Ability to use resources on demand

☐ C. Having a highly available infrastructure

☐ A. Having access to Free and Unlimited Storage

☐ B. Having access to Unlimited Physical servers

What is the most appropriate routing policy to implement in Amazon Route 53, when a web application co-located in two geographically distinct locations is experiencing degraded service in one of the locations.

☐ D. Latency-based routing policy

☐ A. Geolocation routing policy

☐ B. Weighted routing policy

☐ C. Failover routing policy

Which of the below AWS services allows you to increase the number of resources on the demand of the application or users.

☐ B. AWS Autoscaling

☐ D. AWS Inspector

☐ C. AWS ELB

☐ A. AWS EC2

What is the concept of an AWS region?

☐ C. It is a geographical area divided into Availability Zones

☐ A. It is a collection of Edge locations

☐ D. It is the same as an Availability zone

☐ B. It is a collection of Compute capacity

When working on the costing for on-demand EC2 instances , which of the following are attributes which determine the costing of the EC2 Instance. Choose 3 answers from the options given below

☐ A. Instance Type

☐ C. Region

☐ B. AMI Type

☐ D. Edge location

In AWS, which security aspects are the customer's responsibility? Choose 4 answers from the options given below

- ☒ D. Life-cycle management of IAM credentials
- ☐ E. Controlling physical access to compute resources
- ☐ F. Encryption of EBS (Elastic Block Storage) volumes
- ☐ B. Decommissioning storage devices
- ☐ A. Security Group and ACL (Access Control List) settings
- ☐ C. Patch management on the EC2 instance's operating system

Which statement about the Shared Responsibility Model is accurate?

- ☐ A. The user is responsible for AWS physical infrastructure when moving data from their on-premise data center using AWS Snowball
- ☐ C. Amazon is responsible for running operating system updates, patching of application software and its maintenance.
- ☐ D. Compliance with industry bodies and regulatory authorities is the users' responsibility
- ☐ B. The hypervisor and its security is the users' responsibility

What is the service provided by AWS that allows developers to easily deploy and manage applications on the cloud? Please choose an answer from the options below.

☐ B. Elastic Beanstalk

☐ C. Opswork

☐ D. Container service

☐ A. CloudFormation

Which of the following are benefits of the AWS's Relational Database Service (RDS)? Choose the 2 correct answers from the options below

- ☐ D. It allows you to store NoSQL data
- ☐ A. Automated patches and backups
- ☐ B. DB owner can resize the capacity accordingly
- ☐ C. It allows you to store unstructured data

What is the AWS service provided which provides a fully managed NoSQL database service that provides fast and predictable performance with seamless scalability.

☐ C. Oracle RDS☐ D. Elastic Map Reduce☐ B. DynamoDB☐ A. AWS RDS

Which of the following options of AWS RDS allows for AWS to failover to a secondary database in case the primary one fails.

☐ A. AWS Multi-AZ

☐ B. AWS Failover

☐ D. AWS Standby

☐ C. AWS Secondary

A company wants to create standard templates for deployment of their Infrastructure. Which AWS service can be used in this regard?
Please choose one option.

☐ A. Amazon Simple Workflow Service

☐ B. AWS Elastic Beanstalk

☐ C. AWS CloudFormation

☐ D. AWS OpsWorks

An e-commerce web application running on AWS on EC2 is experiencing bad performance in browsing and searching use cases when heavy load order use-cases are running at the same time. The application monitors highlights a bottleneck in the web tier. You decide to re-engineer the application code decoupling the web tier from the orders heavy workloads. What AWS service can support the application change?

☐ A. AWS Auto Scaling☐ C. AWS SQS☐ B. AWS Elastic Load Balancing☐ D. Amazon Kinesis Streams

Which of the following is the amount of storage that can be stored in the Simple Storage service?

☐ B. 5 TB

☐ A. 1 TB

☐ C. 1 PB

☐ D. Virtually unlimited storage

Whilst working on a collaborative project, an administrator would like to record the initial configuration and the several authorized changes that engineers make to the route table of a VPC. What is the best method to achieve this?

☐ C. Use of AWS CloudTrail

☐ B. Use of VPC Flow Logs

☐ A. Use of AWS Config

☐ D. Use of an AWS Lambda function that is triggered to save a log file to an S3 bucket each time configuration changes are made.

A company does not want to manage their database. Which of the following services is a fully managed NoSQL database provided by AWS.

☐ C. Oracle RDS☐ D. Elastic Map Reduce☐ A. AWS RDS☐ B. DynamoDB

A user would like to be notified when their usage bill on any AWS resource surpasses a specified amount. Which combination of AWS services can be used to achieve this?

- ☐ A. AWS Budgets and Amazon Simple Email Service (SES)
- ☐ D. AWS Billing & Cost Management and Amazon CloudWatch
- ☐ C. AWS Cost Explorer and Amazon Simple Notification Service (SNS)
- ☐ B. AWS Lambda and AWS CloudTrail

In AWS billing what option can be used to ensure costs can be reduced if you have multiple accounts

- ☐ A. Combined billing
- ☐ D. It is not possible to reduce costs with multiple accounts
- ☐ B. Consolidated billing
- ☐ C. Costs are automatically reduced for multiple accounts by AWS.

You have a mission-critical application which must be globally available at all times. If this is the case, which of the below deployment mechanisms would you employ

- ☐ D. Deployment to multiple Regions
- ☐ A. Deployment to multiple edge locations
- ☐ C. Deployment to multiple Data Centers
- ☐ B. Deployment to multiple Availability Zones

Which of the following can be used to protect against Ddos attacks. Choose 2 answers from the options given below

☐ D. AWS Shield Advanced

☐ A. AWS EC2

☐ B. AWS ELB

☐ C. AWS Shield

There is a requirement to host a set of servers in the Cloud for a short period of 3 months. Which of the following types of instances should be chosen to be cost-effective.

☐ B. On-Demand☐ A. Spot Instances☐ C. No Upfront costs Reserved☐ D. Partial Upfront costs Reserved

Which of the following options is TRUE for AWS Database Migration Service (AWS DMS) ?

☐ E. All the above

☐ C. AWS DMS can migrate databases from EC2 to Amazon RDS

☐ B. AWS DMS can migrate databases from AWS to on-premise

☐ A. AWS DMS can migrate databases from on-premise to AWS

☐ D. AWS DMS can have Amazon Redshift and Amazon DynamoDB as target databases.

Amazon Macie uses artificial intelligence (AI) and machine learning (ML) in which three main functional components on users' data?

☐ A. Discover, Classify, Protect

☐ C. Optimize, Alert, Secure

☐ B. Observe, Design, Alert

☐ D. Detect, Discover, Alert

Which of the following storage mechanisms can be used to store messages effectively?

☐ B. Amazon EBS Volumes

☐ C. Amazon EBS Snapshots

☐ A. Amazon Glacier

☐ D. Amazon SQS

If you wanted to take a backup of an EBS Volume, what would you do?

☐ B. Store the EBS volume in an RDS database

☐ C. Create an EBS snapshot

☐ D. Store the EBS volume in DynamoDB

☐ A. Store the EBS volume in S3

A company is deploying a three-tier, highly available web application to AWS. Which service provides durable storage for static content while utilizing lower Overall CPU resources for the web tier?

☐ A. Amazon EBS volume

☐ D. Amazon RDS instance

☐ B. Amazon S3

☐ C. Amazon EC2 instance store

Each time a drone flight simulator crashes, it produces a plethora of event logs which the research and development team would like to query and derive utility from. Since this rarely occurs, what cost-effective services can they use to extract their target information?

☐ C. Use Extract, Transform, Load (ETL) processes into MySQL RDS for querying.

☐ D. Configure the simulator to write logs into an Amazon S3 bucket then use Extract, Transform, Load (ETL) processes to build an Amazon Aurora database instance for querying.

☐ B. Upload event logs into an Amazon S3 bucket then use Amazon Athena for querying.

☐ A. Use Extract, Transform, Load (ETL) processes into an Amazon DynamoDB instance for querying.

A company wants to utilize aws storage. For them low storage cost is paramount, the data is rarely retrieved, and data retrieval times of several hours are acceptable for them. What is the best storage option to use?

☐ D. AWS CloudFront☐ C. EBS backed storage connected to EC2☐ A. AWS Glacier☐ B. AWS S3 Reduced Redundancy Storage

Which statements regarding VPC Peering is accurate? Select TWO.

- ☐ C. In VPC Peering, it is possible for traffic from one VPC to traverse through a transit VPC in order to reach a third VPC.
- ☐ A. Two VPCs in different AWS Regions and under separate AWS Accounts can share traffic between each other.
- ☐ B. In order for VPC Peering to work each VPC should have a public subnet.
- ☐ D. Traffic between VPC peers in different AWS Regions is not encrypted by default.
- ☐ E. VPC Peering can be used to replicate data to geographically distinct locations for fault-tolerance, disaster recovery and redundancy

Which of the following is a template that contains the software configuration to launch an ec2 instance?

☐ B. AMI☐ A. EBS Volumes☐ C. EC2 Snapshot☐ D. EBS Snapshot

Which of the following statements about the Total Cost of Ownership (TCO) calculator is accurate.

- ☐ B. The TCO calculator will make suggestions and recommendations on appropriate resource types based on operational best-practices.
- ☐ C. The TCO calculator will make suggestions and recommendations on appropriate resource types based on the user's input values and settings.
- ☐ D. The TCO calculator can generate a detailed report on redundant resources on on-premise infrastructure and recommend operationally efficient best-practices.
- ☐ A. The TCO calculator will generate an estimated usage report and anticipated billing when using on-premise infrastructure

Which services allow the customer to retain full administrative privileges of the underlying virtual infrastructure?

- ☐ C. Amazon Lambda
- ☐ B. Amazon S3
- ☐ A. Amazon EC2
- ☐ D. Amazon DynamoDB

You are planning to serve a web application on the AWS Platform by using EC2 Instances. Which of the below principles would you adopt to ensure that even if some of the EC2 Instances crashes , you still have a working application

☐ A. Using a scalable system

☐ D. Using a fault tolerant system

☐ C. Using a regional system

☐ B. Using an elastic system

Which of the following statements regarding Amazon Athena are accurate? Select TWO.

- ☐ E. Amazon Athena uses a variety of query languages including SQL, LDAP, JPQL as well as CQL.
- ☐ D. Amazon Athena is compatible with data formats such as CSV, JSON, ORC, AVRO and Parquet
- ☐ C. Amazon Athena resources are allocated in accordance to processing and memory requirements prior to deployment.
- ☐ B. Amazon Athena is not suitable for complex analysis such as large joins, window functions and arrays.
- ☐ A. Amazon Athena queries data directly from Amazon S3 and there are no additional data storage commitments beyond the object storage.

In the AWS Billing and Management service, which tool can provide usage-based forecasts of estimated billing costs and usage for the coming months?

☐ D. Cost & Usage Reports

☐ B. AWS Bills

☐ C. AWS Reports

☐ A. AWS Cost Explorer

An administrator is running a large deployment of AWS resources that is spread across several AWS Regions. They would like to persistently keep track of configuration changes on all the resources as well as maintain a configuration inventory. What is the best service they can use?

☐ A. AWS CloudFormation☐ B. Stacks and Templates☐ C. AWS Backup☐ D. AWS Config

You have a Web application hosted in an EC2 Instance that needs to send notifications based on events. Which of the below services can assist in sending notifications

☐ D. AWS EC2☐ B. AWS SNS☐ A. AWS SES☐ C. AWS SQS

In serverless services such as AWS Lambda, what are the implications of the Shared Responsibility Model?

- ☐ A. Amazon has overall responsibility for the infrastructure, including IAM roles and identities that can invoke functions.
- ☐ D. The user is responsible for IAM roles and identities that can invoke the AWS Lambda functions
- ☐ C. Amazon is responsible for any malicious code written in the IDE and can terminate any rouge activity
- ☐ B. The user is responsible for the security and access to the instances that handle the compute capacity.

You are exploring which AWS service will help you in the processing of a large number of data sets. Choose the correct answer from the given list.

☐ D. Storage gateway

☐ C. Glacier

☐ B. S3

☐ A. EMR

Your Security Team has security concerns about some application data that are persisted on S3 in plain text and requires you to introduce two improvements: (i) add "encryption at rest" and (ii) give them the possibility to monitor who/when access data (encrypts/decrypts S3 data).

What AWS solution should you adopt to satisfy the requirement?

☐ C. Server Side Encryption managed by customer (SSE-C)

☐ B. Server Side Encryption managed by S3 (SSE-S3)

☐ A. AWS Certificate Manager

☐ D. Server Side Encryption managed by KMS (SSE-KMS)

An online streaming company is prohibited from broadcasting its content in certain countries and regions in the world. Which Amazon Route 53 routing policy would be most suitable in guaranteeing their compliance?

☐ A. Geoproximity

☐ C. Multi-value answer

☐ D. Failover

☐ B. Geolocation

Which of the following allows you to carve out a portion of the AWS Cloud

☐ C. AWS Regions

☐ D. AWS Availability Zones

☐ B. AWS VPC

☐ A. AWS Subnets

You have 2 accounts in your AWS account. One for the Dev and the other for QA. All are part of consolidated billing. The master account has purchased 3 reserved instances. The Dev department is currently using 2 reserved instances. The QA team is planning on using 3 EC2 instance launch types. What is the pricing tier of the instances that can be used by the QA Team?

- ☐ A. No Reserved and 3 on-demand
- ☐ D. Three Reserved and no on-demand
- ☐ B. One Reserved and 2 on-demand
- ☐ C. Two Reserved and 1 on-demand

Which of the following services helps provide a connection from on-premises infrastructure to resources hosted in the AWS Cloud.
Choose 2 answers from the options given below

☐ D. AWS Subnets☐ B. AWS VPN☐ A. AWS VPC☐ C. AWS Direct Connect

In Identity Access Management (IAM), what is meant by Identity Federation? Select TWO most suitable statements.

- ☐ E. An administrator can configure identity federation so that users can access the AWS environment using their active directory credentials.
- ☐ B. IAM activity logs can be obtained in AWS CloudTrail then uploaded onto Amazon Athena tables for querying.
- ☐ C. A user with multiple AWS accounts and multiple log-in credentials can combine them into one set of login credentials for the multiple AWS accounts.
- ☐ A. It is possible for users to log into the AWS environment using their Facebook, Twitter or LinkedIn login credentials.
- ☐ D. It is the temporary provision of access, using a temporary disposable set of credentials, to an untrusted user.

Which of the following security features is associated with a Subnet in a VPC to protect against Incoming traffic requests.

☐ D. Network ACL

☐ A. AWS Inspector

☐ C. Security Groups

☐ B. Subnet Groups

You want to create a stream processing solution to process and query real-time streaming data using a SQL-based solution. You are looking for the simplest approach available that AWS provides.

What AWS service should you use?

☐ B. Amazon Kinesis Data Analytics

☐ D. Amazon Kinesis Data Firehose

☐ A. Amazon Kinesis Data Streams

☐ C. Amazon Kinesis Client Library

Which of the following is a serverless compute offering from AWS?

☐ C. AWS SNS

☐ D. AWS SQS

☐ B. AWS Lambda

☐ A. AWS EC2

What are characteristics of Amazon S3?
Choose 2 answers from the options given below.

☐ A. S3 allows you to store objects of virtually unlimited size.

☐ D. Objects are directly accessible via a URL.

☐ C. S3 should be used to host a relational database.

☐ B. S3 allows you to store virtually unlimited amounts of data

A company is deploying a new two-tier web application in AWS. The company wants to store their most frequently used data so that the response time for the application is improved. Which AWS service provides the solution for the company's requirements?

- ☐ C. Amazon ElastiCache
- ☐ B. Amazon RDS for MySQL with Multi-AZ
- ☐ D. Amazon DynamoDB
- ☐ A. MySQL Installed on two Amazon EC2 Instances in a single Availability Zone

What is the key difference between an availability zone and an edge location?

- ☐ B. An availability zone is an isolated location within an AWS region, whereas an edge location will deliver cached content to the closest location to reduce latency
- ☐ D. None of the above
- ☐ A. An availability zone is a grouping of AWS resources in a specific region; an edge location is a specific resource within the AWS region
- ☐ C. Edge locations are used as control stations for AWS resources

Which of the following can be used to manage identities in AWS.

☐ A. AWS Config

☐ B. AWS IAM

☐ C. AWS Trusted Advisor

☐ D. AWS

Which of the following statements are FALSE when it comes to AWS DataSync? (Choose TWO)

- ☐ A. A fully managed data transfer service with built-in retry mechanism
- ☐ B. Can work only over AWS Direct:Connect
- ☐ C. It is an agentless data transfer service
- ☐ D. Can copy data between NFS servers, SMB file shares, Amazon S3 buckets, and Amazon EFS file systems.
- ☐ E. It is integrated with AWS CloudWatch

An organization wants to move a mission-critical application based on PostgreSQL to cloud and requires to minimize both the refactoring of database code and the operations to keep it running and healthy.

What is the AWS service that the organization must choose to accomplish the goal?

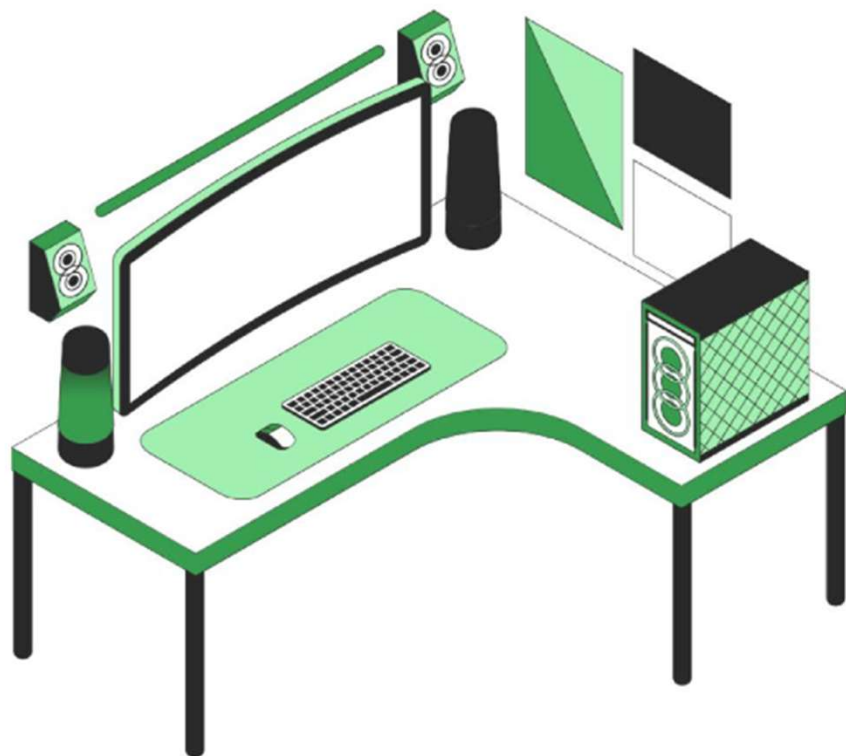

- ☐ D. Use a PostgreSQL Certified image from AWS Marketplace
- ☐ C. Amazon RDS for PostgreSQL
- ☐ B. Spin up a set of EC2 instances across multi-AZs and install the same PostgreSQL version used on-premises.
- ☐ A. Amazon Aurora
