QUESTION 38

You are gathering information to present to management on a potential move to the AWS cloud. Which items are part of the 6 advantages of cloud computing?

✗ Easily predict capacity

✗ Benefit from small economies of scale

✓ Increase speed and agility

Correct: Increase speed and agility – In a cloud computing environment, new IT resources are only a click away, which means that you reduce the time to make those resources available to your developers from weeks to just minutes. This results in a dramatic increase in agility for the organization since the cost and time it takes to experiment and develop is significantly lower.

✓ Trade capital expense for variable expense

Correct: Rather than investing in data centers and server you may never use, you only pay for the computing resources you actually consume.
